EDUCATION

Cornell University, Ithaca, NY

Aug 2024 – May 2028

Bachelor of Science, Information Science; Minor in Business

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Systems Programming, SQL & Relational Databases, Web Technologies

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL

Frameworks & Web: React, Node.js, Vite, Vitest, Bootstrap, Kivy, HTML5, CSS3

Data & Backend: PostgreSQL, Supabase, relational schema design, Row-Level Security, pandas, NumPy, Matplotlib

Developer Tools & Deployment: Git, GitHub, GitHub Actions (CI/CD), Visual Studio Code, Jupyter Notebook, Netlify, GitHub Pages

Concepts: Data Structures & Algorithms, Object-Oriented Programming, REST APIs, Authentication & Authorization, Unit & Integration Testing, Debugging, Code Review, Agile/Scrum, Software Development Lifecycle, Responsive Design, Accessibility

EXPERIENCE

Donyma Steel Complex — Kumasi, Ghana

May 2025 – Aug 2025

Software Engineer Intern

React · JavaScript · Python · REST APIs · Git · Agile

- Redesigned the dashboard and navigation of a production React application used by thousands of customers, reducing page-load time by approximately 20% based on product analytics.
- Built 15+ reusable UI components across 10+ screens, reducing duplicated code and accelerating delivery of subsequent features.
- Integrated frontend views with REST APIs, normalized server responses for display, and debugged interface and data-flow defects across user flows, browsers, and devices.
- Analyzed user-interaction data with Python scripts to prioritize interface improvements, supported deployment, and contributed to code reviews during weekly Agile sprints.

Future Civilisations Society — Ithaca, NY

Jan 2026 – Present

Web Lead & Financial Coordinator

JavaScript · HTML/CSS · Git · Web Analytics

- Design, deploy, and maintain the official conference website, building responsive pages for speakers, panels, and programming while updating content as event plans evolve.
- Use website analytics to monitor engagement and translate usage patterns into navigation and content improvements.
- Manage iterative releases through Git and coordinate changing requirements across programming, marketing, logistics, and budgeting.

Cornell SC Johnson College of Business — Ithaca, NY

Jan 2026 – Present

IT Client Services Assistant

Help Desk · Windows/macOS · Hardware & Software Support

- Handle roughly 10–15 help-desk and walk-in support requests per day, diagnosing device, login, software, and connectivity issues to keep faculty and staff productive.
- Configure and deploy workstations for new staff and faculty, including required hardware, software, and account access.
- Run the loaner-laptop program end to end, tracking inventory, checkouts, allocation, and equipment turnaround across the college.

PROJECTS

Layer — Personalized Weather App

2026 – Present

React · JavaScript · PostgreSQL · Supabase · REST APIs · Vitest · GitHub Actions

- Built and deployed a full-stack React application that turns live forecast data into personalized clothing guidance, then ran a 10-user pilot and iterated on feedback.
- Designed the PostgreSQL schema for profiles, personalization state, and an append-only feedback log, using Row-Level Security, check constraints, and database triggers to protect ownership and timestamps.
- Added offline-first sync with passwordless email sign-in, a local queue for pending writes, and client-generated IDs so retries do not create duplicate records.
- Separated personalization logic from the UI, wrote 40 unit tests, and configured GitHub Actions to run tests and builds before deployment.

Froggit Game Engine

Dec 2025

Python · Object-Oriented Programming · State Machines · JSON

- Developed multi-state Frogger-style gameplay with moving terrain, collision detection, exits, lives, and progression across JSON-defined levels.
- Implemented controller logic for resets, wrapping movement, and win conditions, modeling frogs, pads, hedges, and exits as an interacting object hierarchy.
